

EECS 739: Parallel Scientific Computing

Spring 2021

Course Description

This course is concerned with the application of parallel processing to real-world problems in engineering and the sciences. State-of-the-art serial and parallel numerical computing algorithms are studied along with contemporary applications. The course takes an algorithmic design, analysis, and implementation approach and covers an introduction to scientific and parallel computing, parallel computing platforms, design principles of parallel algorithms, analytical modeling of parallel algorithms, MPI programming, direct and iterative linear solvers, numerical PDEs and meshes, numerical optimization, GPU computing, and applications of parallel scientific computing.

Course Meetings

TR, 4-5:15pm, 2115 Learned Hall

Instructor

Dr. Suzanne Shontz
3016 Eaton Hall
Dept. of Electrical Engineering and Computer Science
Office Phone: (785) 864-8816
E-mail: shontz@ku.edu

Office Hours: By appointment only. Please e-mail me to set-up an appointment in Zoom.

Teaching Assistant

None

Texts

Introduction to Parallel Computing, Second Edition, by Ananth Grama, George Karypis, Vipin Kumar, and Anshul Gupta, Pearson-Education, 2003. Required. (On reserve at Spahr Library.)

Parallel Scientific Computing in C++ and MPI: A Seamless Approach to Parallel Algorithms and Their Implementation, by George Karniadakis and Robert M. Kirby, II, Cambridge University Press, 2003. Required. (On reserve at Spahr Library.)

References

The following books have also been placed on reserve at Spahr Library.

Parallel Programming with MPI, by Peter S. Pacheco, Morgan Kaufmann Publishers, 1997.

Parallel Programming in C with MPI and OpenMP, by Michael J. Quinn, McGraw-Hill Publishers, 2004.

Multicore and GPU Programming: An Integrated Approach by Gerassimos Barlas, Morgan Kauffman Publishers, 2015.

Prerequisites

Math 122 or Math 126; Math 290; experience programming in C, C++, or Fortran; EECS 639 (or equivalent). Highly recommended: Math 127 or Math 223.

Course Requirements

Lecture attendance is required, although attendance will not be recorded. Class participation is also strongly encouraged. The course requirements for EECS 739 include approximately five homework assignments, one midterm exam, and a final project. The homework assignments and final project will require a combination of algorithmic design, problem solving, mathematical analysis, and computer programming (using C/C++, MPI, and CUDA) (not all on every assignment). *Prior knowledge of C/C++, MPI, and CUDA programming is not a prerequisite for the course.*

Homework assignments will be due approximately 14 days after they are assigned. Due dates for homework assignments will be announced in class. **There will be a late penalty of 10% per day for homework handed in up to 48 hours late. No homework assignments will be accepted which are either (i) more than 48 hours late or (ii) are not submitted by 11:59pm the day before Stop Day.**

There will be one midterm exam scheduled for Thursday, March 18. Please reserve this date on your calendar. The midterm exam will be closed-book. It will cover topics drawn from the lectures and homework, and from the underlying algorithms and mathematics. A make-up midterm exam will be given to any student who is absent from the midterm exam for a compelling reason and gets permission from the instructor.

There will be a final project in lieu of a final exam. Each student will design their own individual project (subject to instructor approval) involving several of the following components: algorithmic design, problem solving, mathematical analysis, and computer programming. The project will involve both a written report and a presentation. **Final projects will be due on Thursday, May 13. Presentations on the final project will take place during the final examination period for EECS 739 on May 13.** Please reserve this date on your calendar. A make-up final project presentation will be given to any student who is absent from the final project presentation for a compelling reason and gets permission from the instructor.

Mandated Religious Observances

If you have a mandated religious observance with conflicts with the midterm examination, please contact me privately at the beginning of the semester so that a make-up examination can be scheduled at a mutually acceptable time. (The university policy which applies to religious observances in conflict with examinations does not apply to the final examination period since instructors do not schedule final exams.)

Grading

The homework assignments will count for 40% of the final grade. The midterm exam will count for 30% of the final grade, and the final project will count for 30%.

Your final grade in the class will then be computed by using the weighted average given above and the following scale:

Grade	Percentage
A	[90%-100%]
A-	[88%-90%)
B+	[86%-88%)
B	[78-86%)
B-	[76%-78%)

Fractional Grading Policy. This grading policy is in accordance with the fractional grading policy which was adopted by the School of Engineering. In particular, plus/minus (+/-) grades may be used in the School of Engineering at the instructor's discretion. This course, i.e., EECS 739, will utilize +/- grading in Spring 2021 as indicated above.

Class Schedule

The course calendar shows a week-by-week syllabus. The dates and order of topics are subject to change by the instructor. Any significant changes will be announced in class.

Course Website and E-mail

There is a course website available at the following URL:

http://people.eecs.ku.edu/~s906s230/eecs_739_spring_2021.html .

E-mail will be used for announcements not given in class.

Computing Facilities

Students will have access to a high performance computing cluster in the Information and Telecommunication Technology Center at Nichols Hall in order to run your C/C++ and MPI codes. You will also be able to run your CUDA codes on the GPUs there.

Academic Integrity Policy

Cheating in the course will not be tolerated. Students are allowed to collaborate on the homework assignments with at most one other student of the class. The collaboration should involve no more than the formulation of ideas as a pair. Each student is expected to write up the homework assignment by himself or herself. Students must not hand in homework that represents somebody else's ideas entirely. Students should do the C/C++ and MPI coding and the CUDA coding on assignments by themselves--no program code should be shared. No collaboration of any kind is allowed on the midterm exam. Similarly, no collaboration of any kind is allowed on the final project.

Students are permitted to consult outside published material for the homework and final project, although the homework will be fully based on lecture notes, course handouts, and the textbooks. If a student consults a source other than the lecture notes and textbooks, he or she must cite the source--failure to cite the source will be considered cheating.

If you are uncertain as to whether or not a particular behavior is considered cheating, you are encouraged to discuss it with the instructor before engaging in such behavior.

Anyone found cheating will receive a 0 on that work (homework assignment) or an F in the class (midterm exam or final project). A second incident will result in an F grade for the course. These penalties will be received by all parties involved, following a hearing with the instructor. In all cases, reports of academic misconduct will also be made to the dean's office where further disciplinary action may be taken in accordance with School of Engineering and University of Kansas guidelines. This may result in much more serious sanctions.

Student Access Center

Any student in this course who has a disability that may prevent him/her from fully demonstrating his/her abilities should contact me personally as soon as possible so we can discuss accommodations necessary to ensure full participation in the class.

The Student Access Center (SAC) coordinates accommodations and services for all KU students who are eligible. If you have a disability for which you wish to request accommodations and have not contacted the SAC, please do so as soon as possible. Their office is located in 22 Strong Hall; their phone number is (785) 864-4064 (V/TTY). Information about their services can be found at <http://access.ku.edu> . Please contact me privately in regard to your needs in this course.

Commercial Note-Taking Ventures

Pursuant to the University of Kansas' Policy on Commercial Note-Taking Ventures, commercial note-taking is not permitted in this course. Lecture notes and course materials may be taken for personal use, for the purpose of mastering the course material, and may not be sold to any person or entity in any form. Any student engaged in or contributing to the commercial exchange of notes or course materials will be subject to discipline, including academic misconduct charges, in accordance with University policy. *Please note: note-taking provided by a student volunteer for a student with a disability, as a reasonable accommodation under the ADA, is not the same as commercial note-taking and is not covered under this policy.*

COVID-19

To protect all of us, everyone must wear a mask in the classroom, lab, or faculty/staff offices as required by the Protect KU Pledge and by University policy. Violations of the mask policy are treated as academic misconduct. If one goes to a class without a mask, he/she will be asked to put one on. If you do not put on a mask when asked, you will have to leave class. Violations will be reported, and consequences will follow, up to and including suspension from the course.

Please use the CVKey app for self-screening to help determine if you should attend class. The app are available at <http://cvkey.ku.edu> .

Please visit KU's safety and health webpage: [Protect KU webpage](#); it provides information about safety policies, including social distancing and masks.

Suzanne M. Shontz, Associate Professor, Department of Electrical Engineering and Computer Science, University of Kansas, shontz@ku.edu

**EECS 739: Scientific Parallel Computing
Week-by-Week Syllabus**

Week	Lecture Topics	Notes
1	Feb. 2 and 4: Design Principles of Parallel Algorithms	
2	Feb. 9 and 11: Direct Linear Solvers	
3	Feb. 16 and 18: Direct Linear Solvers	
4	Feb. 23 and 25: MPI Programming	
5	Mar. 2 and 4: MPI Programming/Analytical Modeling of Parallel Algorithms	
6	Mar. 9 and 11: Iterative Linear Solvers	
7	Mar. 16 and 18: Iterative Linear Solvers/ Midterm Exam	Midterm Exam on March 18
8	Mar. 23 and 25: Numerical PDEs and Meshes	
9	Mar. 30 and Apr. 1: Numerical PDEs and Meshes	
10	Apr. 6 and 8: GPUs	
11	Apr. 13 and 15: GPUs	
12	Apr. 20 and 22: Numerical Optimization	
13	Apr. 27 and 29: Numerical Optimization	
14	May 4 and 6: Applications of Parallel Scientific Computing	
FINAL	May 13: Final Project Presentations	Final project presentations on May 13 from 1:30-4pm
