Project Name: Grow Stone Daily

Project Synopsis: An entertaining and interactive daily planner where your progress contributes experience to an interactive stone which grows as you complete tasks and subsequently rank up

Architecture:

We are creating a mobile app which will connect with the University of Kansas (and hopefully more Universities) to populate the app with tasks, news, and other sort of information pertaining to the school life. Tasks and events have a certain amount of points tied to them, and completing tasks contribute to the growth of a stone. Each stone is personal to the user, and users can connect with other students to see their progress. We will leverage the Blackboard and Canvas APIs to complete the auto creation of tasks. Users' points depend on how well they do on their assignments and tests as well. These 3 pictures display much of what the application will do.

TO DO LIST

In Class Problem #1	09.01
In Class Problem #1	09.01
