

MINDLY (13)

Jowaki Merani (CS), Jui Nagarkar (CS), Parveen Kaur (CS), Eduardo Sanchez (CS)

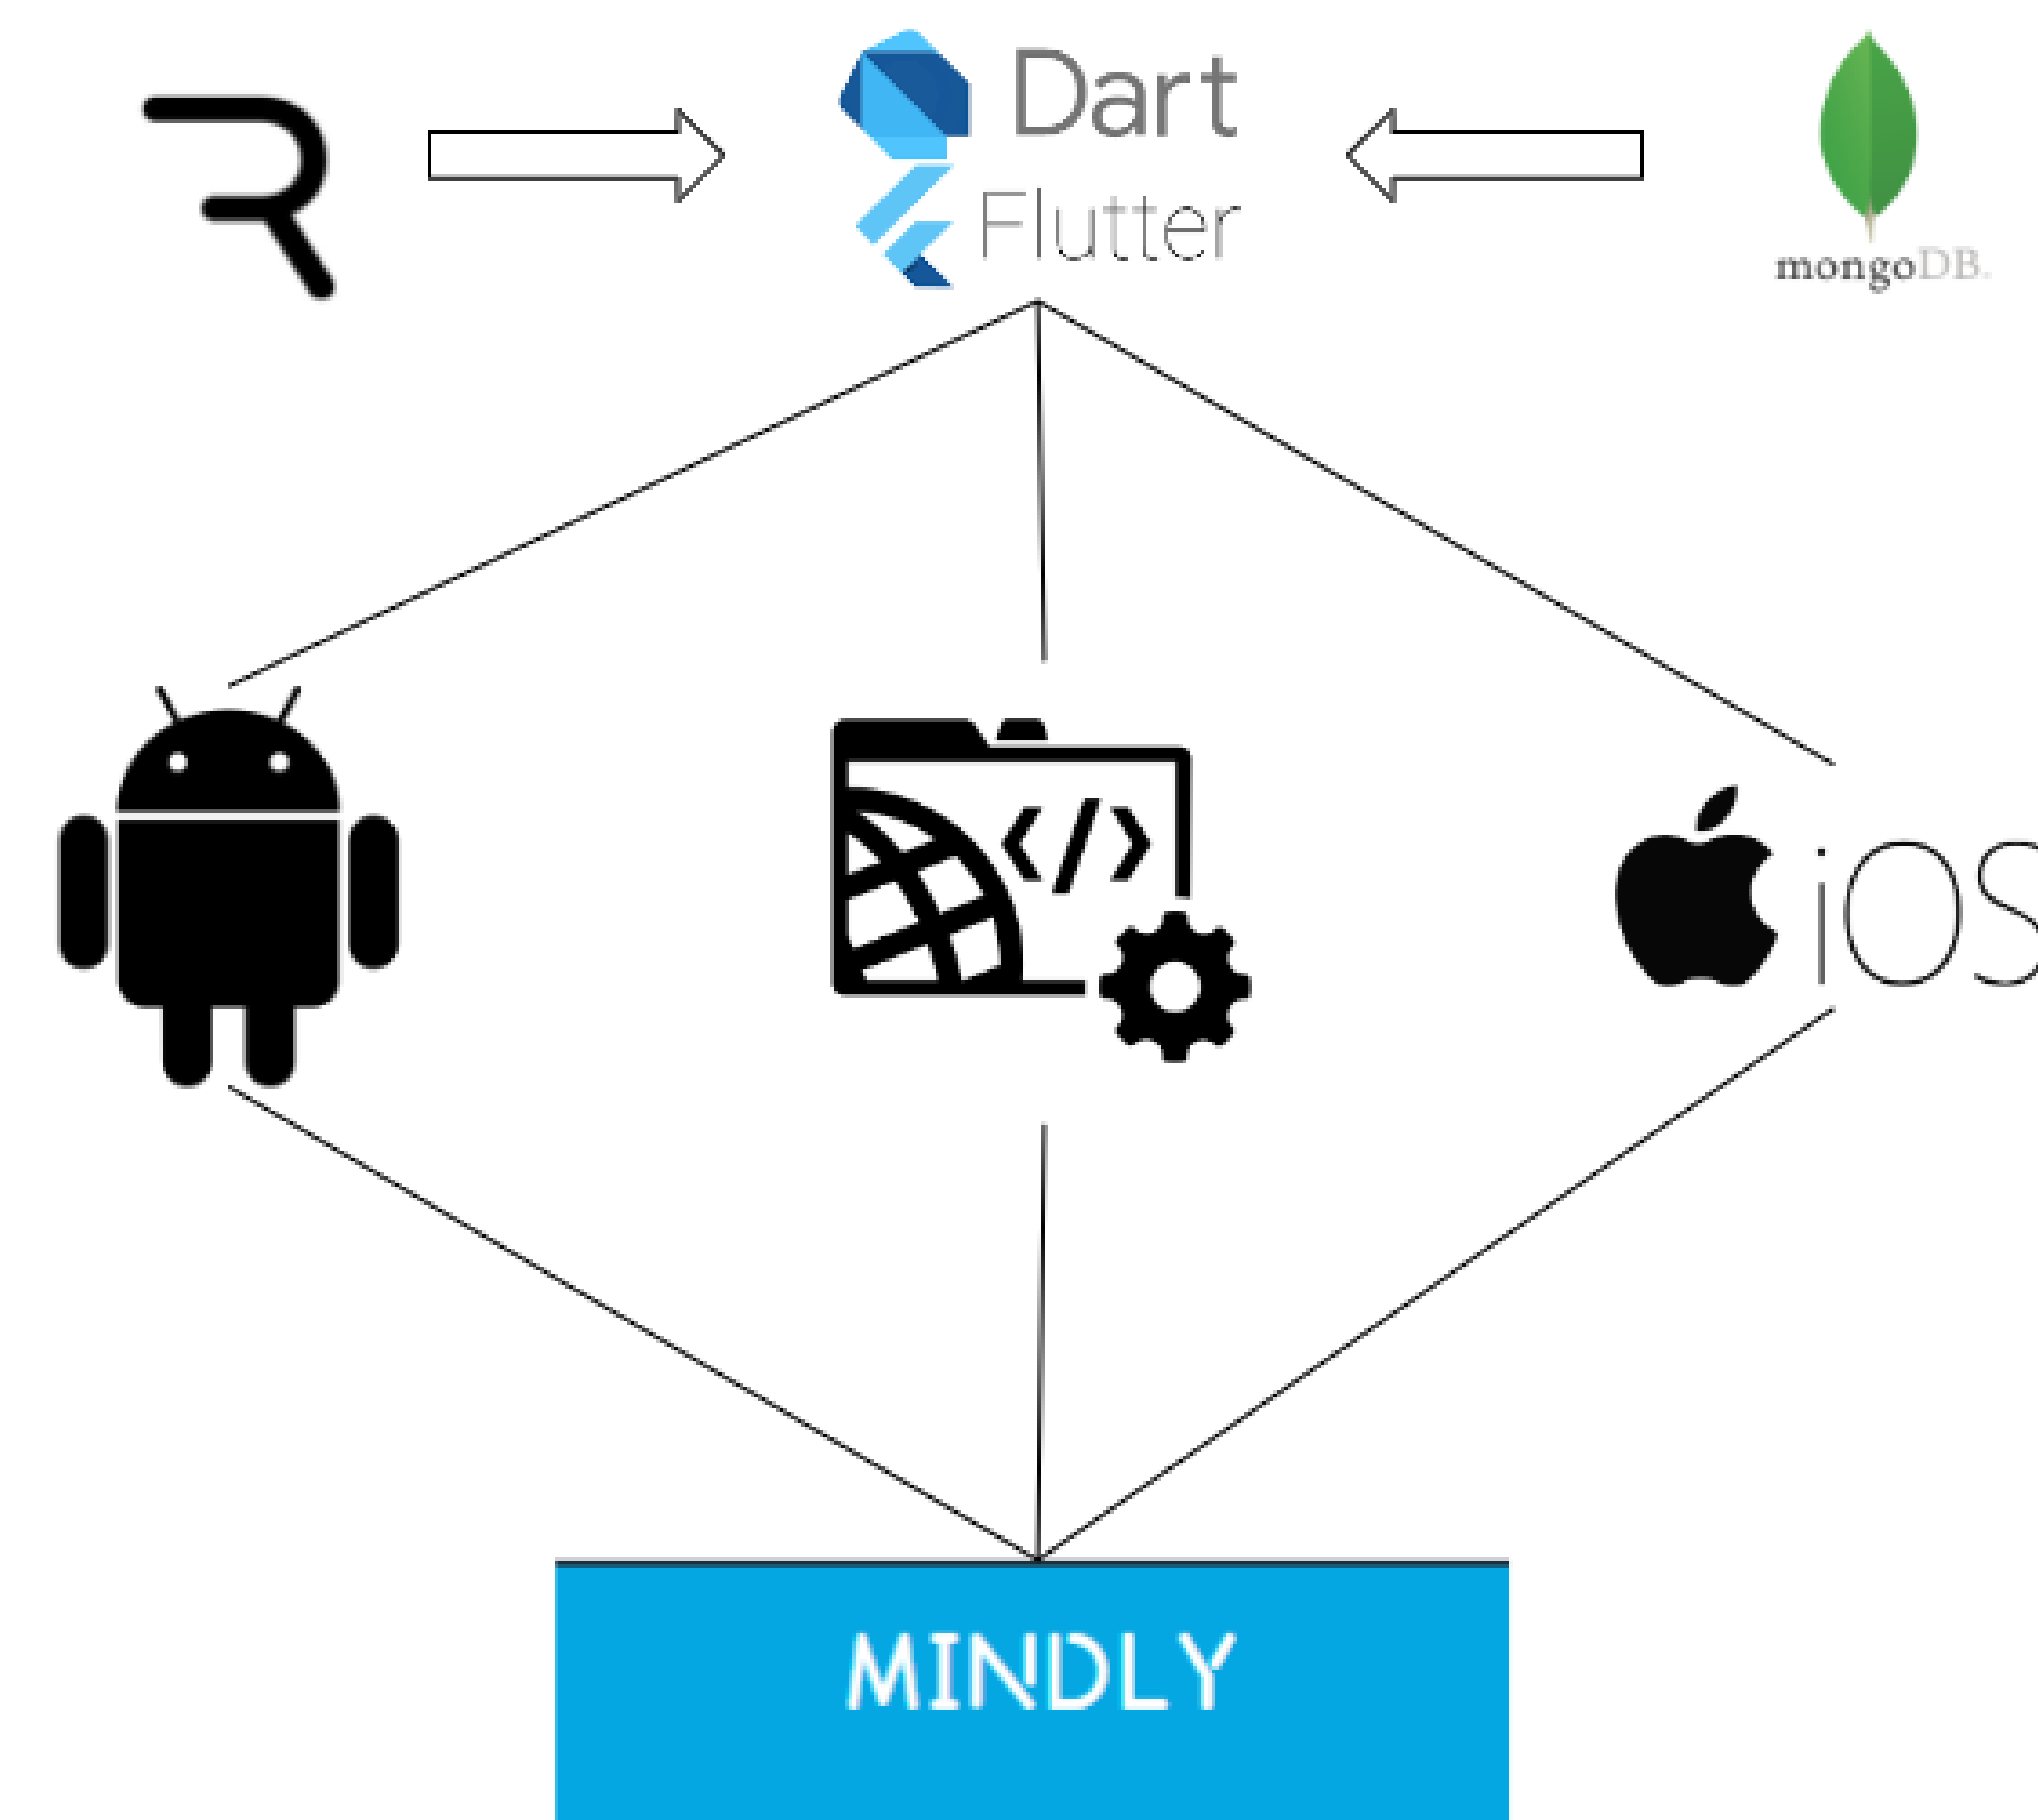

Description & Purpose

- Mindly is a mental health app
- It is aimed at giving the user several possible resources necessary
- To alleviate sense of anxiety
- Successfully created an app that allows users to journal, interact with the animal, play games, etc.

Design

Flutter is a mobile app development framework that offers a high degree of portability. It achieves this by using a single codebase that can be compiled to run on multiple platforms, such as Android, iOS, desktop, and web.

Ethical & Intellectual Property Issues

- Privacy concern since the app is not completely secure so sensitive information can be accessed
- We utilized Rive software to develop our interactive animal. Despite its open-source nature, we recognize the importance of obtaining proper permissions to use the software in our project
