

Calendar Plus (Team 19)

Jake Angus (CS), Max Patiiuk (CS), Jet Semrick (CS), Will Thomas (CS)

Description & Purpose

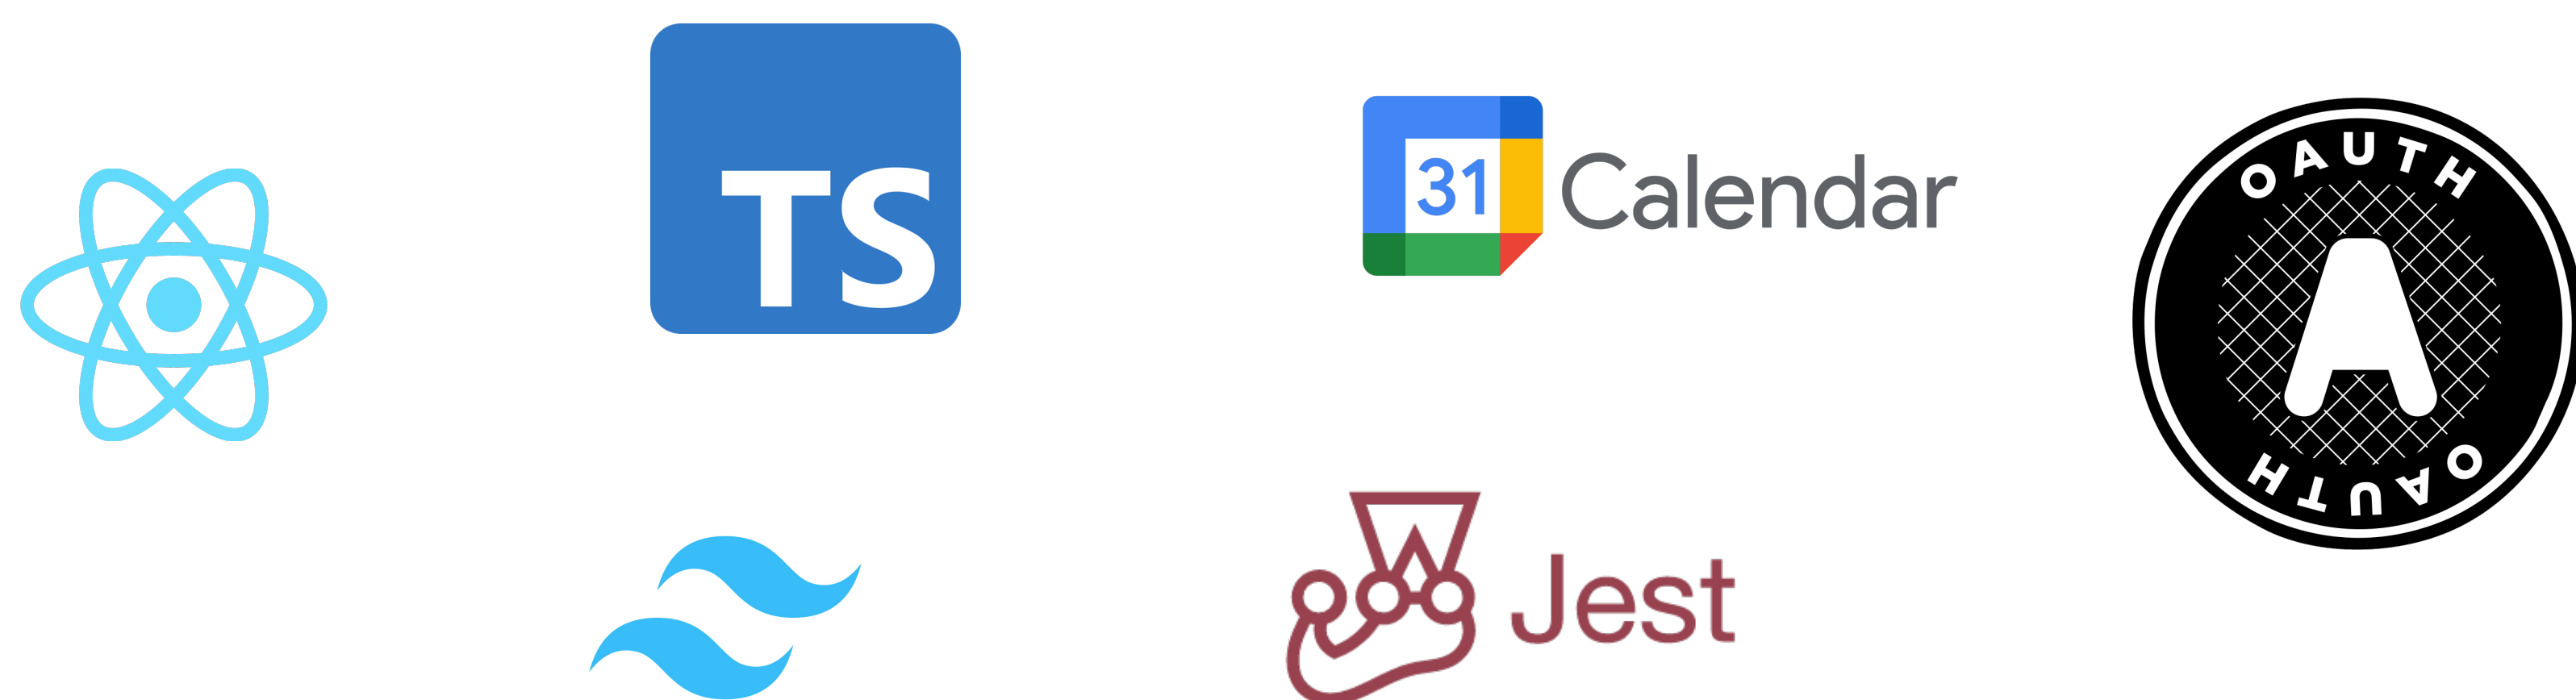

- Calendar Plus is a Chrome Extension for Google Calendar power users.
- The extension adds several productivity features to Google Calendar that are not available natively.
- Tracks time spent on events and plots them on charts
- Built directly on top of the Google Calendar UI

Install Now:

Design

Frontend - React, Typescript, Tailwind, Jest

Backend - Google Calendar API, OAuth

Ethical & Intellectual Property Issues

- For the extension to work, we need access to read-only Google Calendar permissions to allow us to plot your calendar data on our charts
- The extension **does not** collect, store, or share any of your personal or Google Calendar data.
- We do not have any intellectual property issues as we were able to get the extension published on the Chrome Extension store. The publishing process is rigorous, and we would be denied if something like our extension already existed.
